NYS Landscapes Landscapes of NYS Lab #3-9 Pages 123 - 127 ESRT Page 2 ESRT Page 3 Landscape: Forms from the interaction of erosional and uplifting forces. Mountain: A large mass of rock that rises above its base. Plain: A level expanse of land, usually devoid of trees. Plateau: An elevated level, expanse of land. Earth Science LAB 3-9: Landscapes of New York - Vocabulary. Influenced by the rock beneath them. 4 main types: known as DART: Dendritic, Annular, Radial, and Trellis: •Dendritic - treelike, flat relatively uniform materials. •Annular - eroded hill areas. Looks like a "dart board". •Radial - central point drainage. Ex. Mtn. or volcano. Lab 3-9 Landscapes of NY State. Hydrosphere All of the water that rests on and in the lithosphere. Atmosphere The envelope of gases that surround Earth. Lithosphere The rigid crust and upper most part of the mantle. Mountain A landscape feature of high elevation. Plain A landscape of low elevation and gentle slopes,....NEW YORK STATE INTRODUCTION: Landscape forms result from the interaction of erosional and uplifting forces upon various types of bedrock. These rocks differ in their resistance under existing climatic conditions. The great variety of landscape regions in New York is due to the diversity in structure, age and resistance of bedrock found throughout the state.
